Greetings,

I'm running a little behind on posting the screencasts this week but they will be posted no later than the end of today.

Here is your Week 2 overview:

TLCL BOOK: _Chapter 3, Exploring the System_ covers the ls, file, and less commands as well as takes you on a brief tour of the filesystem layout.

TUESDAY: _Installing Linux_ - Part of being a Systems Administrator is installing and updating systems. I'll go over the types of installation media as well as do four different installs. Please watch at least two of the installation videos to get a good feel for the process.

THURSDAY: _CLI Use_ - The GNU Bourne Again SHell (bash) is your default shell so it is a good idea to learn about the environment that is being provided to you. You'll be more productive if you learn the basic hot keys.

VIDEO: _Triumph of the Nerds Part 1 (Impressing Their Friends)_ - Start this fantastic three-part documentary series from PBS that was created in 1996. While it is a bit dated and contains at least one antiquated cultural reference ("It's a boy thing"), you do get to hear from major industry pioneers when they were a LOT younger... and quite a few of them are no longer around.

Suggestions, questions, or comments?

TYL,
Scott Dowdle, x3931, BH262, sdowdle@montana.edu
